

WELCON

Servo Drive

Hardware Manual

WER-D048/60-FS04A7_V04

2024-04-30

Precautions

- Please read this manual carefully before installing and commissioning.
- WELCON SYSTEMS assumes no responsibility whatsoever for any loss or damage arising out of use for any purpose.

Product Name for Welcon Drive

WE 2S-D024/01-FS0057-E

Product Type _____

WE WELCON Standard
 ** User Code (only for customized order)

Drive Shape _____

R Rectangle Type Board
 C Circle Type Board
 M Miniature Board
 2S 2-Axis Slot Type (Backboard necessary)
 2A 2-Axis Stand-Alone Type

Power _____

D DC
 A AC

Voltage _____

024 12~24V
 048 12~48V
 310 12~310V

Continuous Current _____

| | |
|-------------|------------|
| P2 0.2A rms | 08 8A rms |
| P5 0.5A rms | 10 10A rms |
| 01 1A rms | 20 20A rms |
| 02 2A rms | 25 25A rms |
| 03 3A rms | 40 40A rms |
| 05 5A rms | 60 60A rms |

Feedback Sensor (Hexadecimal) _____

| | | | | | | | |
|--------------|---------------------|--------------|--------------------------|--------------|-------------------------------|--------------|----------------------------|
| Bit0 | Incremental Encoder | Bit1 | Dual Incremental Encoder | Bit2 | Separated Digital Hall Sensor | Bit3 | Shared Digital Hall Sensor |
| Bit4 | Sin/Cos Encoder | Bit5 | BISS/SSI Encoder | Bit6 | Analog Hall Sensor | Bit7 | Tamagawa/Panasonic Encoder |
| Bit8 | Potentiometer | Bit9 | SPI | Bit10 | EnDat | Bit11 | PWM |
| Bit11 | Reserved | Bit12 | Reserved | Bit13 | Reserved | Bit14 | Dual Serial Encoder |

Ex) 0057= 0000 0000 0101 0111
 Incremental(Bit0) + Dual Incremental (Bit1) + Separated Digital Hall (Bit2) + Sin/Cos (Bit4) + Analog Hall (Bit6)

Communication _____

E EtherCAT
 C CAN
 R RS-485

1. Safety Information

- Safety accidents and damage to the product may occur, so be sure to read the safety instructions before use and use it correctly.

1.1. Attention Symbols

In the course of the present document, the following symbols and signs will be used.

| Type | Symbol | Description |
|--------------|---|--|
| Safety Alert |  Caution | Indicates a probable hazardous situation or calls the attention to unsafe practices. If not avoided, it may result in injury . |
| |  Warning | Indicates an imminent hazardous situation . If not avoided, it will result in death or serious injury . |
| Information |  | Indicates an activity you must perform prior continuing, or gives information on a particular item you need to observe. |

1.2. Warnings

Warning

- Do not connect/disconnect the main power of the servo drive while the power is on.
- Do not connect/disconnect the servo drive encoder cable and I/O while the power is on. Motor and servo drive may be damaged.
- The power cable can carry high voltage even when the motor is not moving.
- The main power of the servo drive must be accurately input according to the drive specifications. It may cause damage to the drive
- Do not connect power directly to the servo drive U, V, W output terminals.
- After turning off the servo drive power, disconnect the power after the capacitor is completely discharged.

1.3. Cautions

Caution

- Be sure to separate U, V, W cables and encoder cables before wiring.
- After turning off the power, proceed with wiring the U, V, W cables and encoder cables.
- Do not drop it or subject it to strong impact.
- Do not install near flammable substances or water.
- Make sure that no sheath or copper wire gets inside the servo drive.
- It is recommended to use shielded cables for encoder cables.
- For EtherCAT cables, it is recommended to use CAT.6 cables.
- Check the U, V, W and encoder cables of the motor before turning on the power.
- It is recommended to connect the encoder cable and U, V, W and power FG to prevent noise.
- Be careful not to separate the connector from the board when connecting or disconnecting the cable
- Additional cooling and/or heatsink may be required to achieve rated performance.

1.4. Use environment

| 환경 | 조건 |
|-----------------------|---|
| Operating Temperature | 0 °C to 50 °C |
| Maximum Humidity | 90[%] RH |
| Pollution Degree | 2 |
| Operating Place | A place free of iron, flammable gas, dust, etc. |

2. Technical Information

2.1. Mechanical Data

| Item | Unit | Description |
|------------------|------|--------------------|
| Weight | g | 731 |
| SIZE (L x W x H) | mm | 156 * 109 * 69 |
| Fastener | M3 | - |
| Mounting Method | - | Panel / Wall Mount |
| Mounting Screw | M4 | - |

[*For details, please refer to the 3D Modelling on the homepage.](#)

2.2. Mounting Dimension & Ways

2.3. Electrical Data

| WER-D048/60-FS04A7 | | |
|---------------------------------|--------|------|
| Description | Units | 60 |
| Continuous Output Current | A[rms] | 60 |
| Peak Output Current | A[rms] | 120 |
| Minimum Supply Voltage | VDC | 10 |
| Nominal Supply Voltage | VDC | 48 |
| Maximum Supply Voltage | VDC | 90 |
| Control Power Supply | VDC | 24 |
| Maximum Continuous Output Power | W | 2880 |

| Basic Specifications | | |
|--|---|---|
| Feature | Specification | |
| Motors | DC/BLDC/PMSM/VCM | Rotary servo motors, Linear servo motors |
| Current(Torque) Control | Control Periodic | 20KHz |
| | Control Loop | PI + Feed-forward |
| Velocity & Position Control | Control Periodic | 4KHz |
| | Control Loop | Cascade P/PI + Feed-forward |
| | Filters | First order low pass filter, Four notch filters, First order adaptive windowing filters |
| Reference Command | Current/Velocity/Position | USB, CAN(CANopen), EtherCAT(CoE,FoE), RS-485 |
| Auto Tuning | Method | Automatic self-configuration and optimization of motor phasing, wires, current loop, velocity control loop. |
| GUI | User Interface | WELSS(WelconServoStudio), Setting, Drive, Motor, Feedback, I/O, Motion |
| Input Voltage | Motor Voltage: 12~48VDC(H/W Limit 10 ~ 90V) Control Voltage: 24VDC | |
| Protective Functions | Under- and over-voltage, Over-current, Over-load(with I ² T), Drive over temperature | |
| Environment | Ambient temperature: Operation 0~50°C, Storage 0~70°C Humidity: 10~90%, Vibration: 1.0g | |
| Compliance Standard | CE, TUV | |

| Communication* | | |
|---------------------|--|---|
| Feature | Specification | |
| USB | Baud rate: up to 3Mbps, Maximum cable length: 3m | |
| CAN* | Bit rate: 125kbps ~ 1Mbps | |
| EtherCAT* | 100Mbps Communication cycle time: up to 250μs | |
| RS-485* | Baud rate: 9200bps ~ 3Mbps | |
| I/O | | |
| Feature | Specification | |
| Analog Input | Quantity | 2 |
| | Voltage Range | ±10 VDC differential, Motor Temperature |
| | Input Resolution | 14 bit |
| Digital Input | Quantity | 6 + 2 STO (H/W) |
| | Signal | Configurable. Opto-isolated |
| | Voltage | 24V |
| Digital Output | Quantity | 2 + 1 STO (H/W) |
| | Signal | Configurable. Opto-isolated. |
| | Voltage | 24V |
| | Max. Output Current | 40mA |
| Brake | Use one of digital outputs (40mA) | |
| Motor Feedback | | |
| General | Supply Voltage | 5VDC |
| Incremental Encoder | Signal | CH1 : A-quad-B with or without index, RS422, Differential CH2 : A-quad-B with or without index, Single-ended |
| | A-quad-B Max Input Frequency | 10MHz (before quadrature) |
| Digital Hall Sensor | Signal | Single-ended |
| | Type | Separated hall sensor |
| Serial Encoder | Type | SSI, BiSS-C, Tamagawa, Panasonic, EnDat2.x |
| | Bite rate | 0.5Mbps, 1Mbps, 2Mbps, 2.5Mbps, 5Mbps |

* Optional (Refer to product code)

2.4. Protections & Limitations

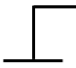

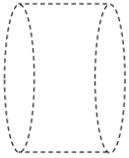

| Protection Functionality | Switch-off threshold | Recovery threshold |
|-------------------------------------|-------------------------------|--------------------------------------|
| Under Voltage | DC Link Voltage Minimum Limit | DC Link Voltage Minimum Limit + 0.5V |
| Over Voltage | DC Link Voltage Maximum Limit | DC Link Voltage Maximum Limit – 0.5V |
| Over Current | 120 A | - |
| Over Temperature | 100 °C | 95 °C |
| Protection | | |
| Motor overload and over-temperature | 110% (at rated current) | |

- Under Voltage and Over Voltage are related to the value set in DC Link Voltage Limit (Index: 0x5012).
- DC Link Voltage Minimum Limit (Subindex: 0x01) can only be set to a value of 10V or above.
- DC Link Voltage Maximum Limit (Subindex: 0x02) can only be set to a value of 90V or below.

3. Wiring

3.1. Wiring Legend

| Wiring Symbol | Description |
|---|-----------------------------|
|  | Earth Connection |
|  | Protective Earth Connection |
|  | Ground |
|  | Twisted-pair wires |
|  | Shielded Cable |
|  | Power Supply |

3.2. Wire Size

When selecting the wire gauge for the motor power wires, power supply wires, and ground wires, it is better to err on the side of larger diameter wire rather than too thin. This becomes more critical as the cable length increases. The following table provides recommendations for selecting the appropriate wire size for a specific current. These values should be used as reference only.

Use 24-28AWG for control wires(I/O, Feedback, Communication Wire) excluding main wires such as motor power.

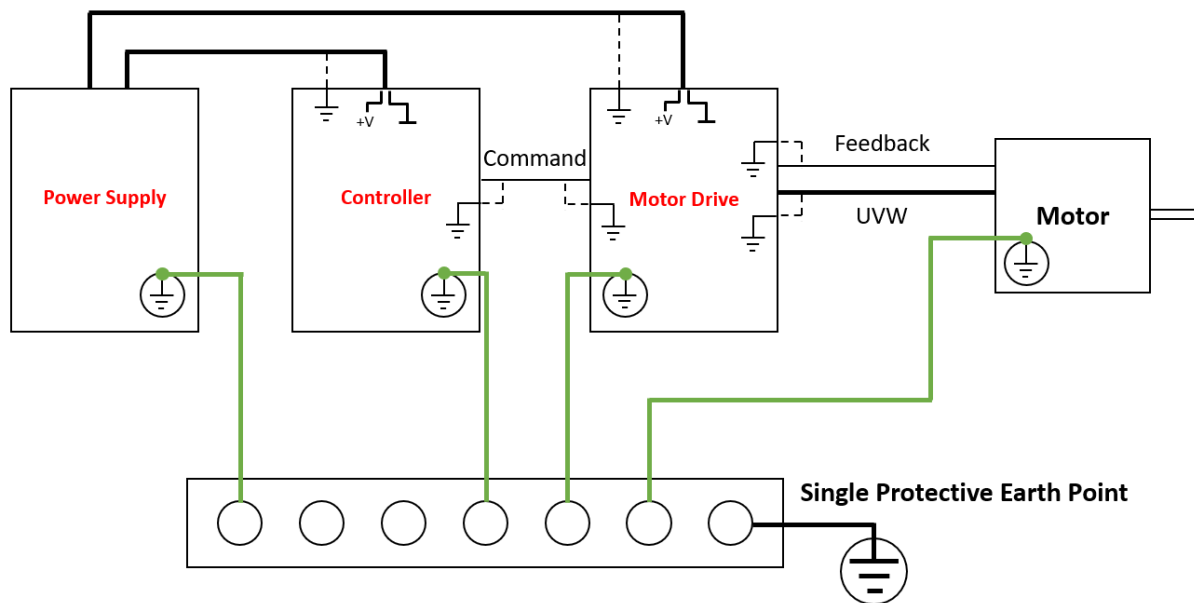

| Current(A) | Minimum Wire Size (AWG) | mm ² | Current(A) | Minimum Wire Size (AWG) | mm ² |
|------------|-------------------------|-----------------|------------|-------------------------|-----------------|
| 10 | 20 | 0.518 | 45 | 12 | 3.31 |
| 15 | 18 | 0.823 | 60 | 10 | 5.26 |
| 20 | 16 | 1.31 | 80 | 8 | 8.37 |
| 35 | 14 | 2.08 | 120 | 6 | 13.3 |

3.3. Wiring Precautions

3.3.1. Grounding

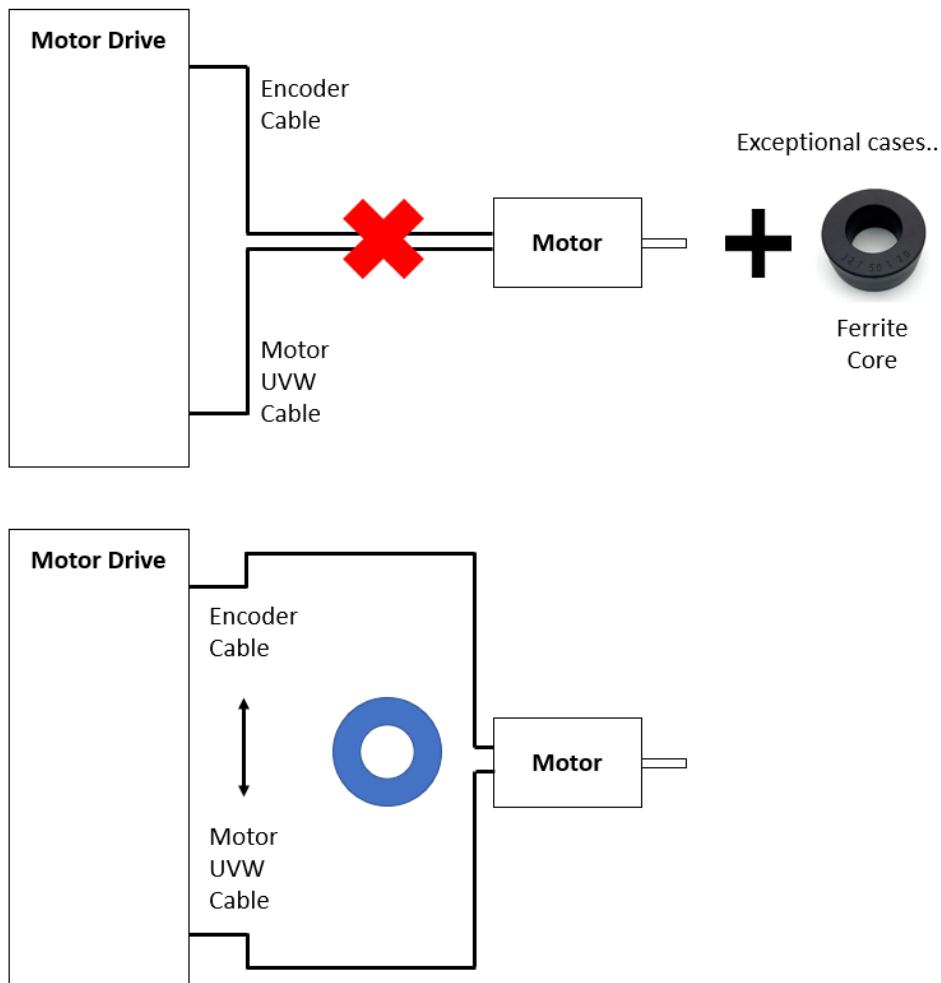

The case grounds of all the system components should be connected to a single Protective Earth (PE) ground point.

Grounding the case grounds at a central PE ground point through a single low resistance wire reduces the chance for ground loops and helps to minimize high frequency voltage differentials between components. All ground wires must be of a heavy gauge and be as short as possible.

3.3.2. Feedback and Motor UVW Wires

Use of a twisted, shielded pair for the feedback wires is recommended. Ground the shield at one end only to the drive chassis ground. Also make sure that the feedback connector and D-sub shell preserve the shield continuity. Route cables and/or wires to minimize their length and exposure to noise sources. The Motor UVW wires are a major source of noise, and the Motor Feedback wires are susceptible to receiving noise. This is why it is never a good idea to route the Motor UVW wires with the Motor Feedback wires, even if they are shielded. Although both of these cables originate at the drive and terminate at the motor, try to find separate paths that maintain distance between the two.

If the two wires cannot be separated from each other, install a ferrite core to attenuate noise. For best results, wind the wire as much as possible, and always in the same direction. When winding the ferrite core around the motor UVW wire, the ground(FG) wire must not pass through the ferrite core.

We have experience solving noise problems in systems with a cable length of 4-5m using King Magnetic’s KMN-503220 product. The specifications of the ferrite core must be appropriately selected depending on the system.

3.4. Tools

| Tool | Manufacturer | Part Number |
|-----------------|--------------|-------------|
| Hand crimp Tool | MOLEX | 63811-6300 |

3.5. Connections

| Connector | Function | Connector | Function |
|-----------|-----------------------------|-----------|----------------------------|
| CN1 | USB | CN7 | STO |
| CN2 | CAN / RS-485 / EtherCAT OUT | CN8 | Digital I/O & Analog Input |
| CN3 | CAN / RS-485 / EtherCAT IN | CN9 | Serial Encoder |
| CN4 | Motor Power | CN10 | Digital Encoder |
| CN5 | Regenerative resistance | CN11 | Motor UVW |
| CN6 | Control Power | | |

3.6. Regenerative resistance

Dinkle_5ESDV-02P

| Dinkle_5EHDR-02P | | J2 |
|------------------|-------------|----|
| Pin | Input Power | |
| 1 | R+ | |
| 2 | R- | |

Warning

- In a system with a large inertia enough to generate regenerative power, you must connect a regenerative resistor to consume energy as heat. Please note that the drive may be damaged by regenerative power.
- Be sure to connect the regenerative resistor after changing the regen clamp cut-off voltage value(Object Index : 0x5013).

- For WER-D048/60-FS04A7, we recommend using a regenerative resistor of approximately 0.8 ohm. However, the appropriate resistance value and capacity vary depending on the load and acceleration/deceleration used in the system, so please calculate the capacity appropriate for your system.

3.7. Control Power

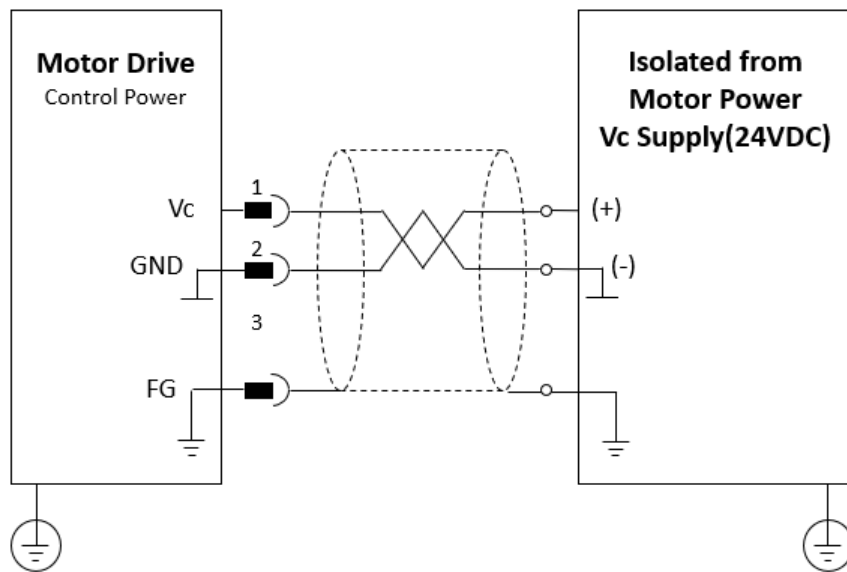

| Dinkle_5EHDR-03P | | J1 | |
|------------------|--------|-------------|--|
| Pin | Signal | Input Power | |
| 1 | VCC | 24VDC | |
| 2 | GND | GND | |
| 3 | FG | FG | |

Warning

- Do not connect/disconnect the servo drive while the power is on.
- Before applying power, make sure that the DC supply is within the specified range.
- make sure the proper plus and minus connections are in order.

3.7.1. Control Power Wiring

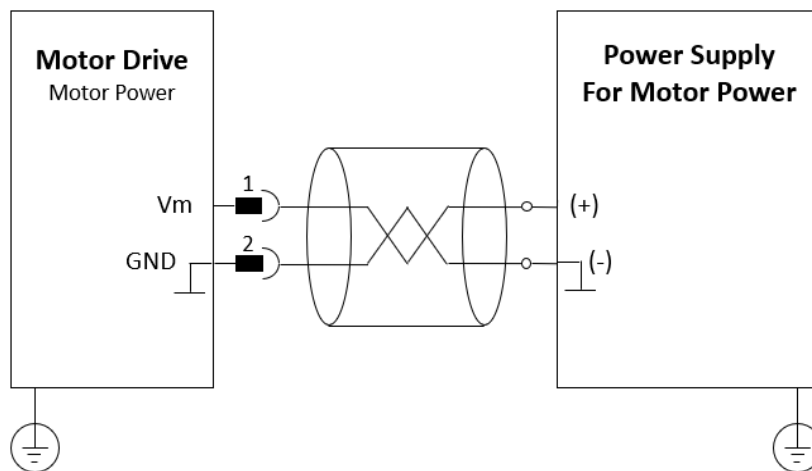

[Control Power(24VDC) Connection Diagram]

3.8. Motor Power

| BEE-RYONG_BR-1600HC-02P | | TB1 |
|-------------------------|--------|----------------------------------|
| Pin | Signal | Input Power |
| 1 | VCC | 12~48VDC(HW Limit : 10 ~ 90 VDC) |
| 2 | GND | GND |

3.8.1. Motor Power Wiring

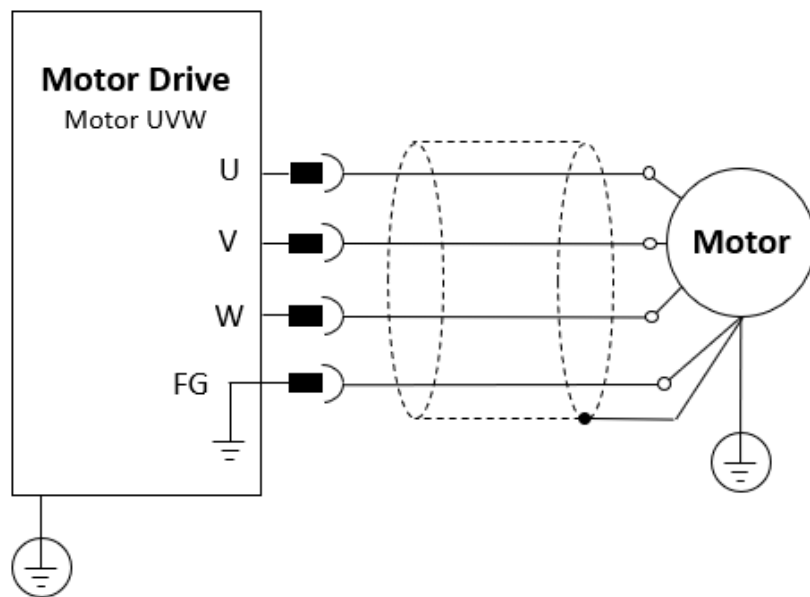

[Motor Power Connection Diagram]

3.9. Motor UVW

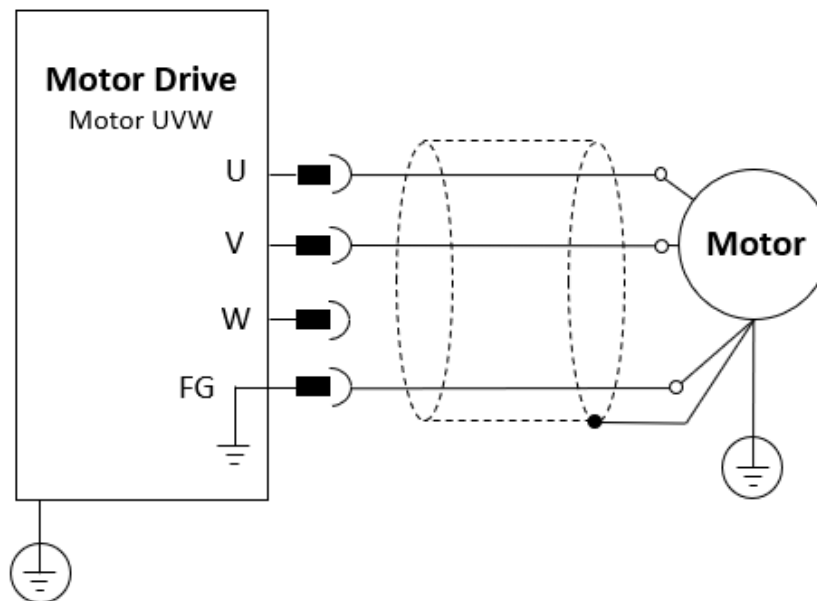

| BEE-RYONG_BR-1600HC-04P | | TB2 |
|-------------------------|-------------------------|-----|
| Pin | Signal | |

| 11 | Hall V | |
| 12 | Not used | |
| 13 | Hall W | |
| 14 | Not used | |
| 15 | FG | |
| 16 | GND | |

3.10.1. Digital Encoder(Port A) Wiring

The cable's shield is connected to the chassis(PE) in the connector.

Earthing the Encoder and connecting the Earth(PE) to the drive FG is mandatory to insure reliable operatin, high noise immunity and rejection of voltage common mode interferences.
